

PRESS RELEASE

Todini Costruzioni Generali S.p.A and Olidata S.p.A sign a strategic partnership agreement for the creation of an Italian Centre of Excellence in infrastructure digitalisation.

Rome, 26 September 2025 – Todini Costruzioni Generali S.p.A., an international leader in the construction of large infrastructure projects, and Olidata S.p.A., a technology holding company listed on Euronext Milan and a leader in Digital Transformation, announce the signing of a strategic partnership aimed at developing integrated solutions for the digitalisation of infrastructure, with a primary focus on the airport sector.

The agreement provides for the establishment of a Centre of Excellence for the digitisation of large infrastructures, which will serve as a centre for research, experimentation and validation of advanced technologies applied to the design, construction and management of complex works. Todini S.p.A. undertakes to use Olidata's digitisation services for a period of three years.

Thanks to the synergy between Todini S.p.A.'s expertise in infrastructure construction and Olidata S.p.A.'s expertise in digital technologies (Big Data, Artificial Intelligence, Cybersecurity, IoT, GIS, ICT infrastructure), the Centre aims to become a strategic national hub with an international vocation, capable of strengthening the competitiveness of the Italian infrastructure system and promoting innovative models of sustainability, operational efficiency, safety and predictive maintenance.

In an increasingly interconnected global context, data, IT infrastructure and digital platforms constitute the strategic framework on which economic competitiveness, national security and the protection of citizens' rights are based. This partnership is one of a number of important initiatives launched to promote the development of solid digital sovereignty, which is now more essential than ever.

Italy's future will be characterised by complex challenges but, at the same time, by significant opportunities to take on a central role in the new scenarios outlined by the digital revolution.
